What you may not know about Barcode Products

INVENTORY MANAGEMENT

The Huge ERP inventory management has a built-in inventory Module which creates automatic logs against the stock items to monitor in and out movements.

ASSET MANAGEMENT

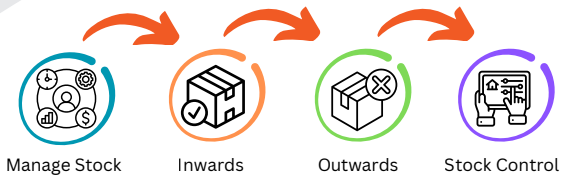

Asset Management system is a powerful and all-inclusive tracking system which helps companies keep track of all their assets, such as vehicles, equipment and hardware.

Product of the month:
Scansku C66 Scanner

INVENTORY MANAGEMENT

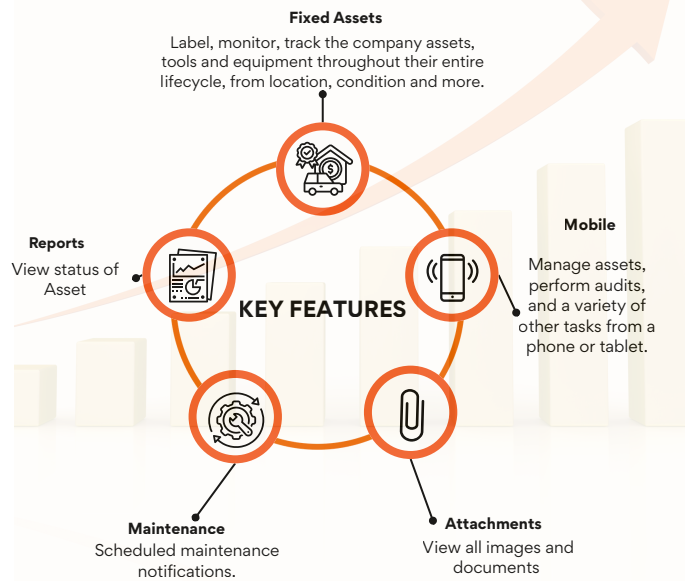

A warehouse and inventory tracking Solution is a software system designed to manage and streamline the storage, tracking, and movement of inventory within a warehouse.

It can also be utilized in the manufacturing sector to generate work orders, bills of materials, and other production-related items. A warehouse and inventory tracking solution are employed to monitor stock levels, inventory usage, sales forecasts, sales records, purchase orders, pick and pack orders, and production status. It is primarily used for tracking goods intended for sale, resale, shipping, storage, or dispatch.

Why use an inventory tracking solution?

- **Accuracy:** It helps maintain precise records of stock levels, reducing errors and discrepancies.
- **Efficiency:** Automates tracking processes, saving time and reducing manual labor, ensure lean and efficient stock management
- **Cost Savings:** Minimizes overstock and stockouts, optimizing inventory levels and reducing holding costs and eliminate stockouts and write-offs

ASSET MANAGEMENT

An asset tracking system or solution involves the methodical tracking of physical assets, either by scanning the assets barcode labels or by using RFID tags to retrieve their details. Such a system is comprised of software (the core component), barcode scanners, barcode labels, sticker tags, and mobile computing devices. These elements work together to streamline and automate the tracking of assets (e.g., equipment, office items, tools) from acquisition to retirement within an organisation.

Why use asset Tracking or Management System?

- **Enhances Efficiency:** Streamlines the process of locating and managing assets, saving time.
- **Variety of Tracking and Management Solutions:** Track Location, Activity Tracking, Disposal Tracking, Inventory Management.
- **Increase asset visibility:** gain real-time insights into the location, status, and usage of all assets, enhancing transparency and reducing downtime.
- **Regulatory Compliance:** Ensure adherence to industry regulations by maintaining detailed records of asset usage and maintenance.
- **Calculate depreciation:** assess the reduction in asset value over time due to wear and tear and usage. Cost reduction: minimize losses from theft, misplacement, or over-purchasing through accurate asset data.

C66-SERIES SCANNER

The C66 Android Barcode Scanner is a Tough and Rugged Device which can enable you to Mobilize your operations. C66 Scanners are used by warehouses, retail stores and logistics companies.

1 User Environment

- Can withstand harsh conditions, rated to IP65. Drop tested to 1.8 metres.
- Versatile, all-in-one device designed for efficient and reliable data collection.

2 Versatile

- Versatile, all-in-one device designed for efficient and reliable data collection.

3 Key Features

- Android 13
- 5.5 inch HD Screen: For clear visibility and easy operation.
- Dual Scanning Capabilities: Equipped with both Linear and Imager scanners, to scan both 1D and 2D barcodes.
- Connectivity: Supports Wi-Fi and Bluetooth
- 13MP Camera: Includes auto-focus, flash, and macro shooting capabilities.
- Scanning range: 80cm
- Battery life: Long Battery Life: 12 hours of active use.

4 Optional Accessories

- Single Charging Dock
- Pistol Grip
- Barcode Count App
