

WUKO

Mini Uber Bender 6050

The **WUKO Mini Uber Bender 6050**, a smart, handy tool offering a nice solution for bending on smaller radii.

- Equipped with an angled bending wheel for bending up to 100°
- Inch scale on the upper shaft
- Two roller stops and two support rollers
- Detachable handle

Adjust the desired bending height with the engraved scale, tighten the wing screw and insert the sheet metal between the bending wheels. The angled bending wheel will be on the inside of the resulting bend.

The roller stops should firmly rest against the sheet metal edge throughout the gradual bending process. Move the tool all the way to the sides with each stroke, until the bending wheel almost comes out the side.

The angled bending wheel avoids potential scratches on the underlying surface, thus the **WUKO Mini Uber Bender 6050** is also the right tool for delicate and spring back materials.

The two support rollers, one to the right and one to the left of the lower shaft give additional support to the leg being bent.

Max. Bending Capacity: 22 ga - Max. Bending Height: 2 in
Weight: 2 lbs (including handle)

The **WUKO Mini Uber Bender 6050**,
a smart tool that doesn't require deep pockets – in both senses!
