PROTECT YOUR FARM FROM DISEASE

Separate

Does it need to come on farm? - if not keep it off

- Limit visitors
- No used equipment unless cleaned and disinfected
- Boots, overalls, protective clothing must be clean
- Provide a rubbish bin for dirty gloves, disposable overalls and other rubbish
- Keep stock trucks away from ٠ animal areas – have loading facilities close to the tanker track

Clean

Things have to be clean before they can be disinfected – disinfectants don't work through dirt

- Provide a place to wash boots and other equipment, and scrubbing brush for visitors
- Have somewhere to wash hands, provide soap
- Wear gloves to keep hands clean
- Clean farm clothing regularly
- Keep the tanker track clean nogo zone for stock

Disinfect

Disinfect to destroy or inactivate the "bugs"

- Provide ready to use disinfectant

Alternatively, you can use 0.2% Citric acid – 1 teaspoon in 1 litre water.

New Zealand Government

• Leave to soak so it works

Change disinfectant regularly

Recommended disinfectants:

Any common agricultural disinfectants are effective against Mycoplasma bovis bacteria. Use product according to the label directions.

Note: Disinfecting the farm dairy requires the use of approved maintenance compounds.
