

# TRACKED SPIDER BOOM

*Access becomes easy...*

New!

"designed  
to go where  
other forms of  
access gear  
can't"

## THE TRACCESS 230.

A tracked spider boom lift with 23 metres working height and 12 metres horizontal reach has joined our fleet!

Spider lifts share all the best features of a scissor lift or a Knuckle boom and even a mast lift. The versatile boom configuration (double pantograph, telescopic boom and jib), the compactness of the equipment and a unique capacity of 200kg makes access possible for your most difficult applications.

### > THE MOST COMPACT IN ITS CLASS

Thanks to its stowed height of less than 2m and a width of less than 80cm, Traccess 230 passes through standard doors and narrow entrances.

### > UNRESTRICTED WORKING AREA

23 metres work height and 12 metres horizontal reach. No electronic limiting device for easier use and to reduce the risk of damage.

### > THE MOST VERSATILE STABILISER CONFIGURATION

TRACCESS 230 stabilizes in 4 different working configurations to perform working operations in perfect ergonomics. Having ground contact sensors and standard automatic stabilization, makes it ideal for maintenance of parks/green areas.

### > PERSONALISED STABILISERS

Ideal for any terrain thanks to the placement of "slide-on" and personalised designed, which contribute to the stabilisation of the TRACCESS 230.

### > TURRET ROTATION

+/- 320 ° turret rotation allows you to reach your correct working position easily and safely

### > WINCH VERSION

Traccess 230 in just 3 steps (basket removal, trim winder application and selection "with winch") is transformed into a small crane.
