

Water Filled Fence Weight

Trafix 2400

SPECIFICATIONS

Length	2400mm
Width	565mm
Height	500mm
Weight - Empty	18kg
Weight - Filled	280kg

Intergrate with our 2400mm high fencing panels.

Built for stability.

Water-filled fence weights provide a secure, heavy-duty and highly visible base for temporary fencing, helping keep panels stable and in position throughout your project. Lightweight and easy to transport when empty, they can be filled on site to provide 280kg of stabilising weight, making them easier to handle and transport than traditional heavy bases. Suitable for both 90° and 180° applications, they're ideal for construction sites, events, roadworks and other temporary fencing requirements.
